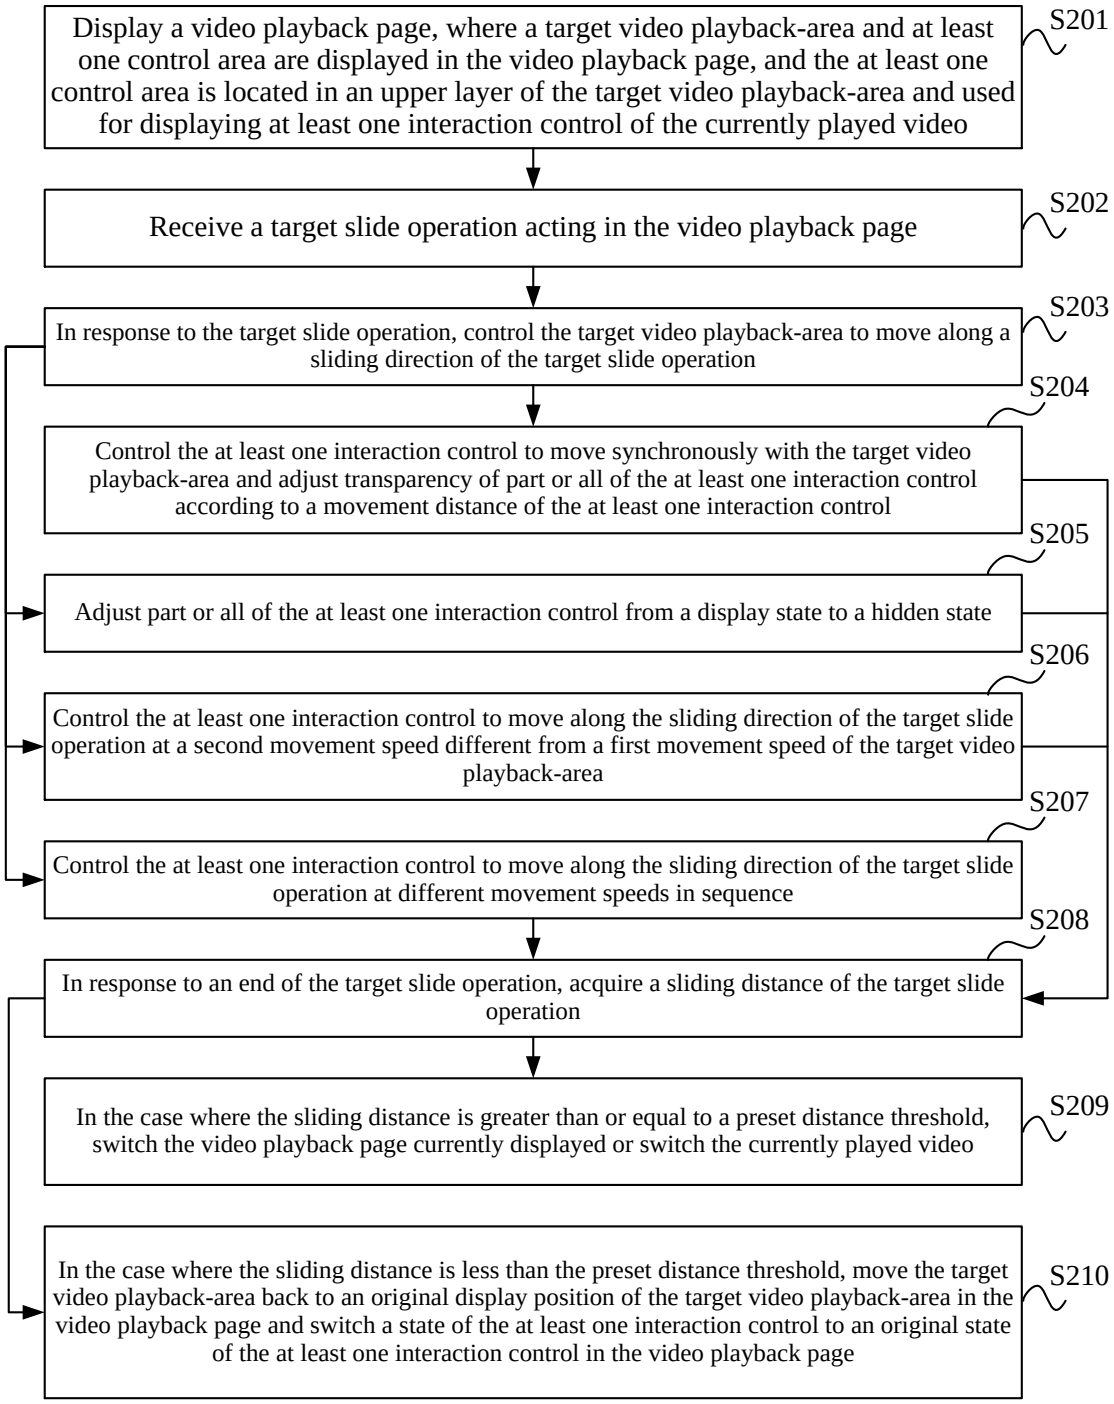
Display a video playback page, where a target video playback-area and at least one control area are displayed in the video playback page, and the at least one control area is located in an upper layer of the target video playback-area and used for displaying at least one interaction control of the currently played video
S201
Receive a target slide operation acting in the video playback page
S202
In response to the target slide operation, control the target video playback-area to move along a sliding direction of the target slide operation
S203
Control the at least one interaction control to move synchronously with the target video playback-area and adjust transparency of part or all of the at least one interaction control according to a movement distance of the at least one interaction control
S204
Adjust part or all of the at least one interaction control from a display state to a hidden state
S205
Control the at least one interaction control to move along the sliding direction of the target slide operation at a second movement speed different from a first movement speed of the target video playback-area
S206
Control the at least one interaction control to move along the sliding direction of the target slide operation at different movement speeds in sequence
S207
In response to an end of the target slide operation, acquire a sliding distance of the target slide operation
S208
In the case where the sliding distance is greater than or equal to a preset distance threshold, switch the video playback page currently displayed or switch the currently played video
S209
In the case where the sliding distance is less than the preset distance threshold, move the target video playback-area back to an original display position of the target video playback-area in the video playback page and switch a state of the at least one interaction control to an original state of the at least one interaction control in the video playback page
S210

FIG. 3



Display a video playback page, where a target video playback-area and at least one control area are displayed in the video playback page, and the at least one control area is located in an upper layer of the target video playback-area and used for displaying at least one interaction control of the currently played video
S201
Receive a target slide operation acting in the video playback page
S202
In response to the target slide operation, control the target video playback-area to move along a sliding direction of the target slide operation
S203
Control the at least one interaction control to move synchronously with the target video playback-area and adjust transparency of part or all of the at least one interaction control according to a movement distance of the at least one interaction control
S204
Adjust part or all of the at least one interaction control from a display state to a hidden state
S205
Control the at least one interaction control to move along the sliding direction of the target slide operation at a second movement speed different from a first movement speed of the target video playback-area
S206
Control the at least one interaction control to move along the sliding direction of the target slide operation at different movement speeds in sequence
S207
In response to an end of the target slide operation, acquire a sliding distance of the target slide operation
S208
In the case where the sliding distance is greater than or equal to a preset distance threshold, switch the video playback page currently displayed or switch the currently played video
S209
In the case where the sliding distance is less than the preset distance threshold, move the target video playback-area back to an original display position of the target video playback-area in the video playback page and switch a state of the at least one interaction control to an original state of the at least one interaction control in the video playback page
