(54) **Title:** PROVIDING PRODUCT LISTINGS ON AN AIRCRAFT FOR PRODUCTS AVAILABLE AT A DESTINATION

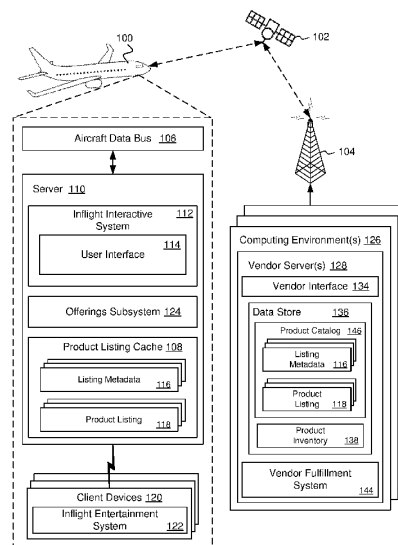

FIG. 1

(57) **Abstract:** Technology is described for providing electronic product listings for products available at a destination. In one example of the technology, destination information may be obtained from an aircraft data bus, where the destination information may be from a plurality of aircraft information systems located on the aircraft. The destination information may be sent to one or more vendor application programming interfaces (APIs) to obtain product details for at least one product that is available for purchase through an inflight entertainment system and available to be delivered to a customer at a flight destination. Product details received from a vendor API may be sent to a client device to be displayed in a graphical user interface of an inflight entertainment system, allowing a passenger on the aircraft to view the product details with a plurality of product details for a plurality of products and purchase the product through the inflight entertainment system.
