Method and system for monitoring quality control of an application

Abstract

The present disclosure provides methods and systems for monitoring quality control of an application. In some examples, there is provided a method for monitoring quality control of an application. The method comprises: identifying one or more files that are affected by a proposed change initiated by a user, the proposed change being initiated by a change request, the change request comprising data relating to the one or more files and information relating to the proposed change, wherein the identification is based on the data; and determining an area of the application that is affected by the proposed change based on the identified one or more files and the information.
