(54) Title: MOVABLE SECURITY BARRIER STRUCTURE

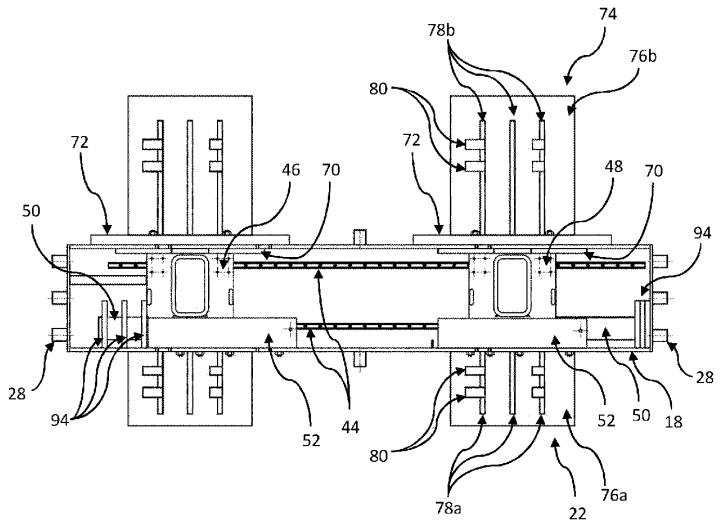

Figure 4

(57) Abstract: A structure (12) for a movable security barrier (10) is provided. The structure (12) has an impact facing side (A) and a protection facing side (B). The structure comprises a first bollard support (46) for supporting a first bollard (14), a carrier structure (18) supporting the first bollard support (46), and a lid (20). The first bollard support (46) is movable along a track (44) within the carrier structure (18). When closed, the lid (20) prevents movement of the first bollard support (14) along the track (44). In some arrangements the structure (12) also has a second bollard support (48) for receiving a second bollard which is also movable along the track (44) within the carrier structure (12), and the lid (20) also prevents movement of the second bollard support (48) along the track (44.)
