ABSTRACT

Figure 15 shows an airborne pathogen reduction device 1302 that create an air suction power at an air inlet 1402. A mist of airborne exhalation droplets 1304 from a first office worker 1208 is sucked into the air inlet 1402. The mist of airborne exhalation droplets 1304 is sanitized or trapped within the airborne pathogen reduction device 1302 and released at an air outlet 1502.
