WASHING MACHINE

ABSTRACT

A washing machine according to the present invention includes a housing, a water tub that is supported by the housing, a drum that is disposed in the water tub and rotatably provided, a drain path that discharges water drained from the water tub to an outside, a filter case that is provided in a middle of the drain path, and a filter body that is detachably housed inside the filter case and collects foreign matter contained in the drained water. The filter body includes a central portion extending in a longitudinal direction of the filter body, and a plurality of side portions extending in a U-shape with the central portion being as a center.
