TRANSACTION AUTHENTICITY VERIFICATION METHOD AND SYSTEM, AND STORAGE MEDIUM

ABSTRACT

This specification provides a transaction authenticity verification method and system, and a storage medium. In the method, a computing device can obtain transaction information of a target transaction and a transaction certificate document corresponding to the target transaction, and extract document key information from the transaction certificate document; and can further obtain a knowledge graph pre-constructed based on fact data, and further verify authenticity of the target transaction based on the transaction information, the document key information, and the knowledge graph by using a large model, to obtain an authenticity verification result.
