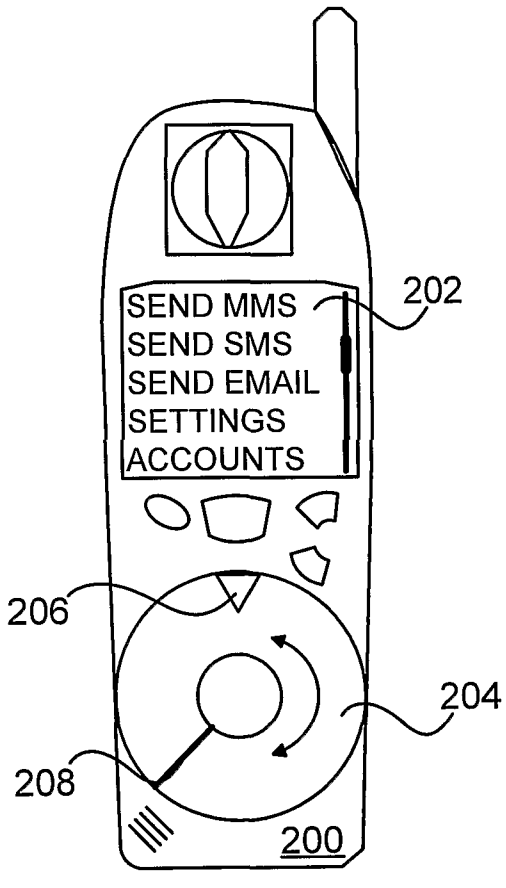
(54) Title: IMPROVED MOBILE COMMUNICATION TERMINAL AND METHOD



(57) Abstract: A mobile communication apparatus comprising processor means and a user interface is disclosed. The user interface comprises a display and an input means. The input means comprises a rotating input means arranged to provide an angular movement signal in accordance with an angular movement of the rotating input means for selecting an item from a plurality of selectable items arranged to be presented on said display, wherein one or more of the selectable items are associated with a feedback signal, and the rotating input means is arranged to provide feedback according to the feedback signal to a user when operating the rotating input means in a position related to the items associated with a feedback signal. An input method for the mobile communication apparatus is also disclosed.
