ABSTRACT

Method for assembling an apparatus intended for being placed in a body of water

The method includes the following steps:

- providing the base (14), including an upper surface (22) and mountings (16) projecting above the upper surface (22);
- assembling guiding rails (36) on the mountings (16);
- placing the module (18) intended to be installed on the base (14) on an upper surface located next to the base (14);
- translating the module (18) on the guiding rails (36) in order to bring it onto the base (14);
- placing the module (18) on the mountings (16) so that the mountings (16) support the weight of the module (18);
- releasing the guiding rails (36) relative to the mountings (16);
- removing the guiding rails (36) by horizontal movement opposite the upper surface (22) of the base (14).
