ABSTRACT

SPARKLER BIRTHDAY CANDLE

The present invention relates to a sparkler birthday candle, which comprises a candle body (1), provided with a projection (2) at its lower end to be inserted into a birthday cake; and it also comprises a sparkler piece (5) and is provided with an insertion hole (4) at the upper portion of the candle body (1) for the sparkler piece (5). The lower end of the piece (5) has an insertion portion that can be fitted into the insertion hole (4) that is close to the birthday candle wick (3). By adopting the aforementioned technical solution, it is only necessary to insert and light the sparkler in the insertion hole (4), and the wick (3) of the candle can be lit when the sparkler burns and sparkles. The product is inexpensive and suitable for widespread use as a disposable product, and the sparklers and the candles can be packaged and transported separately. It reduces safety risks and at the same time can be assembled and used on site in a quick and easy way.
