CLAIMS

[Claim 1]

A mat for a diaper changing table comprising a mat body, a first restraint part of a projecting shape provided on said mat body at an edge or near said edge of said mat body, in which the first restraint part is configured to abut against a bottom or legs of an infant to guard against the infant sliding to the front side, and side wall parts provided at edges of said mat body other than the above edge,

wherein said side wall parts is configured to extend above from the top ends of the changing table body of the diaper changing table where said mat for a diaper changing table is placed, and

wherein said first restraint part is a shape of a half member obtained by splitting a column vertically.

[Claim 2]

A mat for a diaper changing table comprising a mat body, a first restraint part of a projecting shape provided on said mat body at an edge or near said edge of said mat body, in which the first restraint part is configured to abut against a bottom or legs of an infant to guard against the infant sliding to the front side, side wall parts provided at edges of said mat body other than the above edge, and projecting shaped second restraint parts provided on said mat body in which the second restraint parts are configured to restrict movement of the infant in the left-right direction,

wherein a safety belt for securing the infant is provided between the two second restraint parts, and

wherein said first restraint part is a shape of a half member obtained by splitting a column vertically.

[Claim 3]

The mat for a diaper changing table according to claim 2, wherein the first restraint part and the second restraint part are provided integrally with the mat body.

[Claim 4]

The mat for a diaper changing table according to one of claims 1 to 3, wherein the first restraint part is provided so that a longitudinal direction of the half member becomes parallel with one side of the mat body.

[Claim 5]

A diaper changing table comprising a changing table body and mat,

wherein the changing table body includes two side plates, a top plate provided between the two side plates, a back plate provided between the two side plates, and a dividing plate provided on the top plate,

wherein the mat includes a mat body, a first restraint part of a projecting shape provided on said mat body at an edge or near said edge of said mat body, in which the first restraint part is configured to abut against a bottom or legs of an infant to guard against the infant sliding to the front side, side wall parts provided at edges of said mat body other than the above edge, and

wherein the mat is configured so as to fit into one space on the top plate divided by the dividing plate.

[Claim 6]

The diaper changing table according to claim 5, wherein said first restraint part is a shape of a half member obtained by splitting a column vertically.

[Claim 7]

The diaper changing table according to claim 6, wherein the first restraint part is provided so that a longitudinal direction of the half member becomes parallel with one side of the mat body.
