INSTANT ONLINE LOTTERY METHOD AND SYSTEM

Abstract

The system for an instant online lottery game comprises a server and a plurality of instant online lottery units in communication with the server. The server stores a progressive jackpot that can be won with an online lottery number, and has a first random number generator for generating the instant online lottery number and a second random number generator for generating a plurality of game-play combinations. Each instant online lottery unit receives the progressive jackpot value from the server, and has a price selection input for receiving a selection of an instant online lottery ticket price at which an instant online lottery ticket is purchased, each instant online lottery ticket price corresponds to a distinct known percentage of a progressive jackpot and distinct secondary prizes.
