ABSTRACT

A DEVICE FOR DISPENSING ATOMIZED FLUIDS

The present invention discloses a device (100) for dispensing atomized fluids such as fragrances, the device comprising a plurality of docking receptacles (200), each for receiving a detachable fragrance cartridge (201), the docking receptacles (200) being configured such that atomized liquid fragrances discharged from the fragrance cartridges (201), when present in the device (100), converge together to blend the fragrances prior to being dispensed from the device (100).
