What is claimed is:

1. A child seat comprising:

at least one leg;

a seat member supported by said at least one leg;

an armbar connected to said seat member; and

a tray directly couplable to said armbar and supported by said armbar.

2. The child seat of claim 1, wherein when said armbar is connected to said seat member, said armbar extends across a front of said seat member.

3. The child seat of claim 1, wherein said armbar includes a bumper member and a crotch member extending from said bumper member.

4. The child seat of claim 3, wherein only said bumper member is directly connectable to said seat member.

5. The child seat of claim 3, wherein said seat member further comprises a seat portion, a first upright sidewall, and a second upright sidewall, and a first leg opening is formed between said crotch member and said first upright sidewall and a second leg opening is formed between said crotch member and said second upright sidewall.

6. The child seat of claim 5, wherein said armbar is directly connected to said first upright sidewall and said second upright sidewall.

7. The child seat of claim 1, wherein said tray is positionable in overlapping arrangement with said armbar.

8. The child seat of claim 1, wherein said tray further comprises at least one latch operable to directly couple to said armbar.

9. The child seat of claim 8, wherein said at least one latch is movable between an extended position and a retracted position and in said extended position, said at least one latch is operable to engage said armbar.

10. The child seat of claim 9, wherein said tray has a channel formed therein and said armbar is at least partially receivable within said channel, wherein in said extended position, said at least one latch extends across said channel.

11. The child seat of claim 10, wherein said tray further comprises at least one engagement tab extending across a portion of said channel, said at least one engagement tab being operable to contact said armbar.

12. The child seat of claim 11, wherein said at least one latch and said at least one engagement tab are aligned about said channel.

13. The child seat of claim 1, wherein said armbar is permanently connected to said seat member.

14. The child seat of claim 1, wherein said armbar is removably connected to said seat member.

15. The child seat of claim 1, wherein said tray is supported by said armbar without any coupling to said seat member.

16. The child seat of claim 1, wherein said tray further comprises at least one rib, said at least one rib being supported by said seat member.

17. The child seat of claim 16, wherein said armbar further comprises at least one slot, said at least one rib being receivable within said at least one slot to position said tray about said armbar.
