Abstract :

DEVICE FOR HEALTH AND BEAUTY CARE

A device for health and beauty care comprises an energy wave generator 1 consisting of a microprocessor, a signal generator, a filter, an attenuator, a gain amplifier, an exciter, a loop detector and a voltage display. The surface of the energy wave generator is provided with a plurality of sockets and knobs. The sockets are for connecting a conducting wire with a free end separated into a positive-polarity connector and a negative-polarity connector. The device for health and beauty care further comprises two connecting plates respectively connected to the positive-polarity and the negative-polarity connectors of the conducting wire. Each of the connecting plates further includes an insulting pad. To use the present invention, a person places his or her bare feet of on the connecting plate, and the massagist stands on the connecting plate barefooted, thereby forming a conducting medium and enhancing the massage effect by the electric energy wave.
