SUBSCRIPTION AUTHORIZATION SYSTEM AND METHOD, STORAGE MEDIUM, AND COMPUTER SYSTEM

ABSTRACT

This specification discloses a subscription authorization system and method, a storage medium, and a computer system. In comparison with a conventional subscription manner, when the subscription authorization system provided in this specification is used to execute a subscription task between a merchant and a user, an acquiring server continuously requests to obtain an authorization code from an electronic wallet, until the authorization code is obtained, and the electronic wallet sends the authorization code to an acquiring institution after receiving an obtaining request sent by the acquiring server. The acquiring server continuously polls the electronic wallet for the authorization code, to effectively resolve a problem that a sudden network fluctuation leads to an authorization code transmission failure and further leads to a subscription loss.
