**TITLE OF INVENTION: [A METHOD AND SYSTEM FOR CONNECTING AN ELECTRONIC APPARATUS WITH A MOBILE DEVICE]**

## ABSTRACT

The present invention discloses a method for operating a first group of massage apparatuses (106)using a mobile device (102), wherein the massage apparatus (106) comprises a first communication unit (103) operable to establish connection with the mobile device (102); wherein the method comprises the following steps of: S401 operating the mobile device (102) to connect with a plurality of the massage apparatuses (106) through the first communication unit (103); S402 selecting the first group of massage apparatuses (106) from the plurality of the massage apparatuses (106) connected with the mobile device (102); S403 selecting a massage program applicable to the first group of massage apparatuses (106); S404 operating the mobile device (102) to initiate the massage program (107), wherein the massage program (107) instructs the first group of massage apparatuses (106) to perform a massage operation. The present invention offers a user-friendly approach for operating a massage program involving multiple massagers on a single mobile device, eliminating the complex steps typically required to register, connect, reconnect and associate the relevant devices, thereby significantly enhancing user experience and convenience.
