ABSTRACT

PRODUCTION OF RECOMBINANT COLLAGEN LIKE PROTEINS

The present invention is directed to a yeast cell for producing a recombinant collagen like protein. The present invention is further directed to a kit of parts or a co-expression system for use in the production of such a protein and to a method of producing said recombinant protein and a thread made therefrom. Furthermore, the invention pertains to proteins or threads obtainable by these methods as well as their use in various fields of technology and medicine.
