CLAIMS

~~1) Protective case for a credit card or similar, in the shape of a flat envelope, comprising two parallel walls between which a space is formed, intended to accommodate the card (2) to be protected, and provided at one end with an opening (10) allowing the insertion or extraction of said card (2), characterised in that it comprises at least two parts (3, 4, 5) each comprising one of said two parallel walls, and in that one of said at least two parts (3, 4, 5) is slidably mounted on the other, and is shaped to accommodate and hold said card (2), and to this end comprises a housing (32, 42, 52) into which a card (2) can slide, said housing (32, 42, 52) comprising on the one hand at the side a reversible means for holding said card (2), in order to secure same, and on the other hand having an opening by which said card (2) can be extracted by sliding, after sliding the part (3, 4, 5) containing said card (2).~~

2) Protective case according to claim 1, characterised in that the part slidably mounted on the other is shaped so that the card it contains cannot come into contact with the other part, and to this end the housing designed to contain said card has on the one hand the transverse dimensions allowing said card (2) to be accommodated with a certain tolerance, and on the other hand on the two edges perpendicular to that situated on the side of said end with an opening (10) projections (33, 43, 53), able to cover the edges (23) of said card (2) so as to hold said card (2) and enable it to slide, and which are of a thickness substantially greater than that of the raised elements (22) formed by embossing on the said card (2).

3) Protective case according to claim 2, characterised in that each of the at least two parts (3, 4, 5) is shaped to accommodate and hold a card (2) so that the latter cannot come into contact with the other part (3, 4, 5) or another card (2), and to this end each of said at least two parts (3, 4, 5) comprises, on the side opposite the other part (3, 4, 5), a

CLAIMS

1) Protective case for a credit card or similar, in the shape of a flat envelope, comprising two parallel walls between which a space is formed, intended to accommodate the card (2) to be protected, and provided at one end with an opening (10) allowing the insertion or extraction of said card (2), comprising at least two parts (3, 4, 5) each comprising one of said two parallel walls, one of said at least two parts (3, 4, 5) is slidably mounted on the other, and is shaped to accommodate and hold said card (2), and to this end comprises a housing (32, 42, 52) into which a card (2) can slide, characterised in that said housing (32, 42, 52) comprising on the one hand at the side a reversible means for holding said card (2), in order to secure same, and on the other hand having an opening by which said card (2) can be extracted by sliding, after sliding the part (3, 4, 5) containing said card (2).

2) Protective case according to claim 1, characterised in that the part slidably mounted on the other is shaped so that the card it contains cannot come into contact with the other part, and to this end the housing designed to contain said card has on the one hand the transverse dimensions allowing said card (2) to be accommodated with a certain tolerance, and on the other hand on the two edges perpendicular to that situated on the side of said end with an opening (10) projections (33, 43, 53), able to cover the edges (23) of said card (2) so as to hold said card (2) and enable it to slide, and which are of a thickness substantially greater than that of the raised elements (22) formed by embossing on the said card (2).

3) Protective case according to claim 2, characterised in that each of the at least two parts (3, 4, 5) is shaped to accommodate and hold a card (2) so that the latter cannot come into contact with the other part (3, 4, 5) or another card (2), and to this end each of said at least two parts (3, 4, 5) comprises, on the side opposite the other part (3, 4, 5), a
