ABSTRACT

Tower for loading and/or offloading from a tank of a vessel, and tank comprising such a tower.

The object of the present invention is a loading and/or offloading tower (100) for a tank of a vessel that is intended to contain liquefied gas. The loading and/or offloading tower (100) comprises at least one mast (101) and a pumping member (107) having a motor (102), a pump (103), and a tube (104) connecting the pump (103) and the motor (102), the tube (104) being housed along all or part of its length in the mast (101) of the tower (100).

A further object of the present invention is a tank of a vessel, said tank being intended to contain a liquefied gas and comprising a loading and/or offloading tower (100) according to the first object of the invention.
