ABSTRACT

FILTER FOR CLEANING SYSTEM(S)

The present disclosure relates to a filter for a cleaning system. The filter may include a separator element accommodated within a housing. The housing may include a first hollow member connected to an inlet of the cleaning system Further, the filter may include a conical separator accommodated within the first hollow member. Further, the filter may include a second hollow member adjoined to the first hollow member and the conical separator. Further, the conical separator may separate water from debris received from the inlet of the cleaning system in the first hollow member when the debris is centrifugally circulated relative to the conical separator and the water is drained from the first hollow member to the second hollow member.
