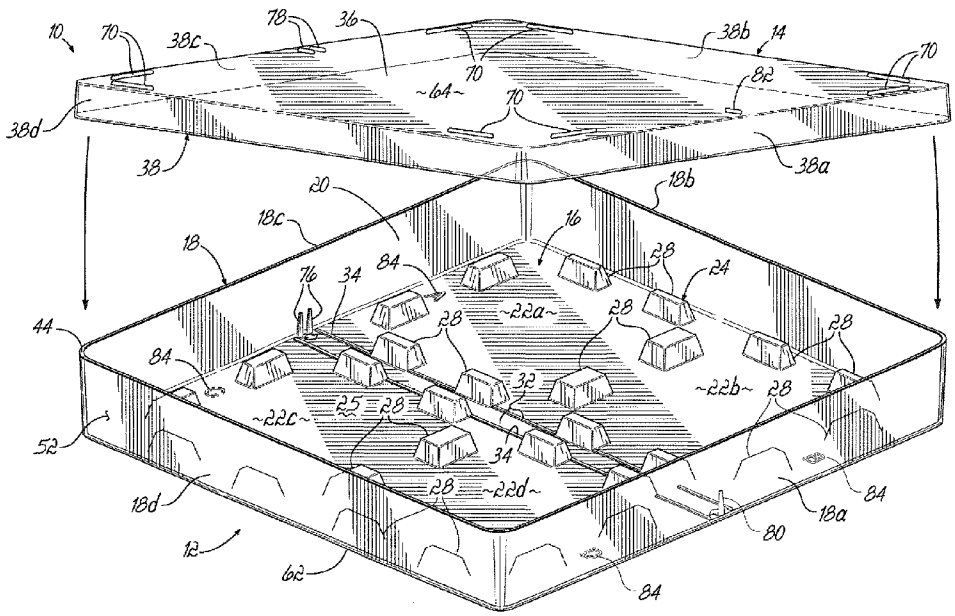
(54) Title: CULTURE DISH WITH LID



(57) Abstract: A device for culturing cells or tissue includes a culture dish (12) with a bottom wall (16) and at least one sidewall (18) to define an interior cavity (20), at least one channel (32) formed on the bottom wall (16) to minimize the effect of fluid movement on biologies in the dish and, optionally, at least one barrier wall (24) for partitioning the interior cavity (20) into a plurality of compartments (22). The barrier wall (24) maintains a biologic in one compartment separate from a biologic in another compartment. The barrier wall (24) may also provide fluid communication between compartments (22).
