ABSTRACT

VIRTUAL MACHINE RUNNING METHOD AND APPARATUS, STORAGE MEDIUM AND ELECTRONIC DEVICE

Disclosed are a virtual machine running method and apparatus, a storage medium and an electronic device. The method includes: in response to at least one virtual machine being in a running termination state, determining, by a virtual machine controller, a first image running memory and a first image backup memory pre-allocated for the virtual machine, when a virtual machine restart instruction is received; copying, by the virtual machine controller, a virtual machine image stored in the first image backup memory to the first image running memory; and executing, by the virtual machine controller, a virtual machine recovery instruction to trigger a jump to a kernel entry address of the first image running memory so as to resume running of the virtual machine.
