(54) Title: METHODS AND APPARATUS FOR IMPROVING NFC ACTIVATION AND DATA EXCHANGE REPORTING MECHANISMS

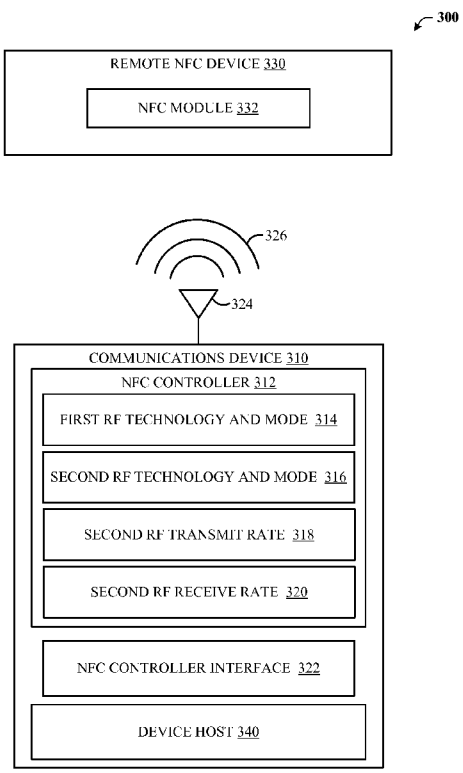

FIG. 3

(57) Abstract: Aspects disclosed herein relate to improving reporting NFC RF technology usage in activation and data exchange for a NFC device. In an example, with a NFC device a NFCC may be configured to obtain a first radio frequency (RF) technology and mode value, a second RF technology and mode value, and one or more RF specific parameters associated with a remote near field communication (NFC) device during an activation phase of a communication link using a first NFC RF technology. In an aspect, the one or more RF specific parameters and the first NFC RF technology may be based on the first RF technology and mode value. Further, the NFCC may be configured to configure communications to be supported by a second NFC RF technology for use during a data exchange phase of the communication link. In an aspect, the second NFC RF technology may be based on the second RF technology and mode value.
