USE OF *PEDIOCOCCUS PENTOSACEUS* GKP4 IN MANUFACTURE OF MEDICAMENT OF IMPROVING SARCOPENIA

ABSTRACT OF THE DISCLOSURE

The present invention is related to a use of *Pediococcus pentosaceus* GKP4 in the manufacture of a medicament of improving sarcopenia, in which the medicament includes an effective dosage of the *Pediococcus pentosaceus* GKP4 as an active ingredient. The medicament increases the muscle strength and the muscle endurance of the subject administered with the medicament when compared to a corresponding subject not administered with the medicament.
