Claims

1. A high-performance packaging method for packaging, in particular small-sized, products, preferably confectionary, such as hard or soft caramels, pralines or similar, **characterized in that** the products (7) are guided through at least one packaging device (1) in a plurality of product flows (A, B),

   characterized in that, after packing of the product (7), the packaging is guided, in particular in a thermally conditioned state, preferably along a cooling line or a heating line, for assisting the process of sealingly closing the packaging, in particular sealing the packing material.
