USE OF MOMETASONE FUROATE FOR TREATING AIRWAY PASSAGE AND LUNG DISEASES

ABSTRACT

The adminstration of mometasone furoate in the form of powders, solutions, or aqueous suspension for treating corticosteroid-responsive diseases of the surfaces of upper and/or lower airway passages and/or lungs, e.g., allergic rhinitis and asthma is disclosed. Pharmaceutical compositions and devices useful for administration of mometasone furoate for treating such diseases are also disclosed.
