ABSTRACT OF THE TECHNICAL CONTENT OF THE INVENTION

The present invention relates to the field of chemotherapy.

More precisely, it relates to a trisequential oestro-progestogenic combination, characterized in that it is made up of dosage units comprising only an oestrogen, dosage units comprising a combination of an oestrogen and a progestogen, and dosage units comprising only an excipient.

This trisequential mode of administration is intended for compensation of functional disorders caused by hypoestrogenia associated with the menopause or the premenopause.
