

BLOOD COLLECTION TUBE HOLDER AND BLOOD COLLECTION KIT

Abstract

A blood collection tube holder that prevents a blood collection tube from falling even when pressed by an elastic sheath body being compressed is provided. A blood collection tube holder 1 includes a blood collection tube holder body 11 and a holding member 12. The blood collection tube holder body 11 includes a needle tube 17 supported by a needle base 15, and an elastic sheath body 18 covering the needle tube 17, and the holding member 12 includes a press-contact member 22. The blood collection tube holder body 11 includes a tongue-shaped protrusion piece 20.
