(54) Title: SYSTEM AND METHOD FOR VERIFYING PRESENCE AT LOCATION

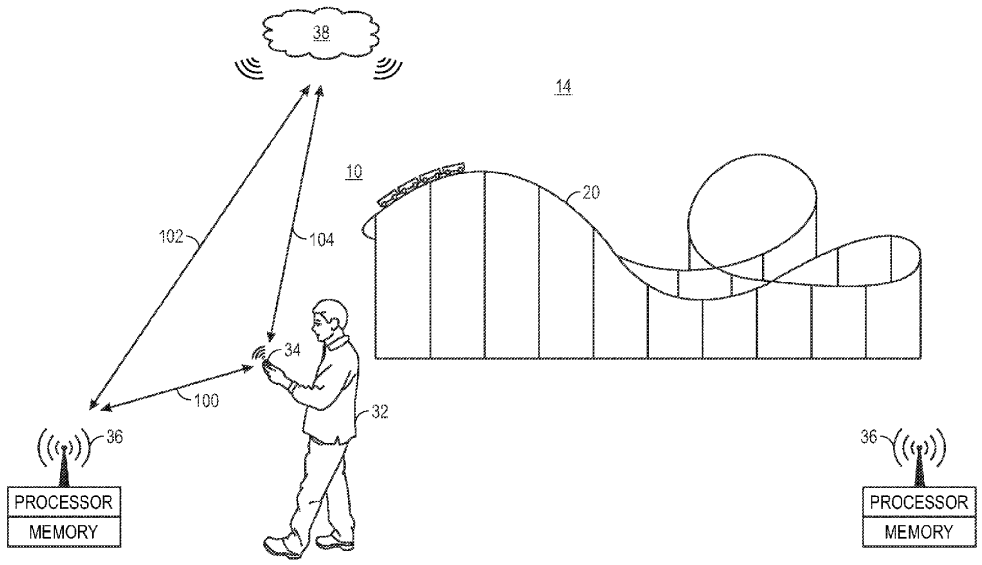

FIG. 2

(57) Abstract: A network node includes processing circuitry and memory. The memory is accessible by the processing circuitry and stores instructions that, when executed by the processing circuitry, cause the processing circuitry to perform operations that include establishing a connection with a mobile device, transmitting, to the mobile device, a value, receiving, from the mobile device, a modified value generated by the mobile device in response to receiving the value, comparing the modified value to an expected value of the modified value, in response to the modified value matching the expected value of the modified value, generating a verification that the mobile device is within range of the network node 36, and transmitting the verification to a server.
