METHOD AND SYSTEM FOR ENSURING RECEIPT OF TRANSACTION DATA GENERATED DURING OFFLINE TRANSACTIONS

ABSTRACT

The present application provides methods and devices for ensuring receipt, at an acquirer, of transaction data generated during an offline mode payment performed at a payment terminal. The methods comprise transmitting, from a payment terminal to an acquirer, transaction data generated during approval of an offline mode payment performed at the payment terminal, the transaction data being transmitted to the acquirer as payload in a data packet to confirm connectivity between the payment terminal and the acquirer.
