ABSTRACT

IMPROVEMENTS IN OR RELATING TO THE MONITORING OF PEOPLE

A security badge (10) comprises a card holder (12) in which an identification card, in the form of an IC card (14), is received. This IC card (14) has both memory and processing means, and carries a photograph (16) of the individual whom it identifies. The card holder (12) is provided with a processor (24) powered by a solar cell (22). Each individual with access to a secure area, is provided with an individual identification IC card (14), and is required to display his security badge (10). The security badge (10) is arranged to display, on display (20), information validating the presence of the individual and/or showing that the individual has performed certain requirements.
