ABSTRACT

A REMOTE COMMANDER

A remote commander is provided including a main body; a main processor module; a transmitter module and a receiver module; a processing unit and a storage module; function keys connected with and be controlled by the processing unit; a transmitting element and a receiving element; power supply positioned on the back of the case. The present invention device further comprises: a handgrip processing module connected with the main processor module; a remote control handgrip connected with said handgrip processing module; an encrypting code identify module connected with the main processor module; an encrypting code identify key is positioned on the main body connected with the encrypting code identify module. The present invention can be applicable to fulfill more operation functions and can make the operation with higher safety.
