
A service platform receives a first service request sent by a source system, where the first service request includes a source system account and information about a target system
S110
Retrieve a target system account from a predetermined storage unit based on the source system account and the information about the target system
S120
Send the first service request and the target system account to the target system, so that the target system performs a service operation corresponding to the first service request after verifying the target system account
S130
Receive a first execution result returned by the target system, and forward the first execution result to the source system
S140

FIG. 1

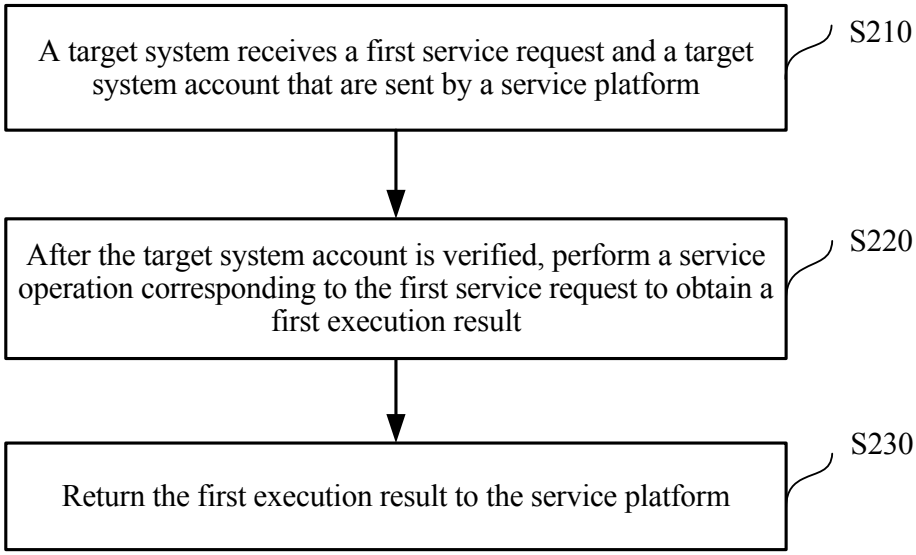

A target system receives a first service request and a target system account that are sent by a service platform
S210
After the target system account is verified, perform a service operation corresponding to the first service request to obtain a first execution result
S220
Return the first execution result to the service platform
S230
