# GROUND STRUCTURE, AND HEATER AND CHEMICAL VAPOR DEPOSITION APPARATUS INCLUDING THE SAME

## ABSTRACT OF THE DISCLOSURE

A ground structure of a heater includes a ground mount, a ground terminal, a conductive holder and a connection member. The ground terminal is movably inserted into the ground mount. The conductive holder is arranged in the ground mount to holding the ground terminal. The connection member electrically connects the conductive holder to the ground mount. Thus, the conductive holder may closely make contact with the ground terminal so that the ground terminal may not be damaged.

FIG.1 accompanies the abstract.
