(54) Title: "METHOD AND SYSTEM FOR PROCESSING DATA FOR DATABASE MODIFICATION"

**FIG. 2**(57) **Abstract:** The invention relates to a
method and system for processing data for
database modification, comprising receiv-
ing a set of data, performing a processing
chain comprising a plurality of consecutive
jobs to transform the set of data into trans-
formed data, modifying a production data-
base with respect to the transformed data
and further comprising the steps of setting a
target processing time for the performance
of the consecutive jobs, before a launch of
a first job, applying an original configura-
tion as current configuration defining a par-
allelization level for each of the consecut-
ive jobs, before a launch of at least one fur-
ther job after the first job, upon an actual
remaining processing time being out of a
range of acceptable remaining processing
times, applying an adapted configuration as
new current configuration defining an ad-
apted parallelization level for each of the
jobs remaining in the processing chain, said
adapted configuration differing from the
current configuration. Application to integ-
ration of large volumes of data into data-
bases.
