[CLAIMS]

[Claim 1]

A diaper comprising:

a nonwoven fabric extending from a back side of a baby, through a crotch portion thereof, to an abdomen side thereof;

a back sheet provided on an opposite side of the nonwoven fabric to the baby to prevent human waste, which is excreted by the baby, from penetrating therethrough;

an absorbent provided between the nonwoven fabric and the back sheet to absorb the human waste which has penetrated through the nonwoven fabric; and

a belt portion fixed to at least one of the nonwoven fabric and the back sheet, and extending to both sides in a direction that crosses a direction in which the nonwoven fabric extends, and moreover having a connection portion removably connectable to the nonwoven fabric, wherein

a portion, in which the nonwoven fabric and the back sheet are bonded together, has at least one part serving as an extension portion that does not overlap the absorbent and extends from an end portion of the absorbent on the abdomen side further toward the abdomen side,

in the direction in which the nonwoven fabric extends, a length of the extension portion is greater than a length of the connection portion,

the connection portion is a hook-or/and-loop fastener, and

a frontal tape to be connected to the hook-or/and-loop fastener is provided on a top surface of the nonwoven fabric.

[Claim 2]

The diaper according to claim 1, wherein

the frontal tape is provided in the extension portion.

[Claim 3]

A diaper comprising:

a nonwoven fabric extending from a back side of a baby, through a crotch portion thereof, to an abdomen side thereof;

a back sheet provided on an opposite side of the nonwoven fabric to the baby to prevent human waste, which is excreted by the baby, from penetrating therethrough;

an absorbent provided between the nonwoven fabric and the back sheet to absorb the human waste which has penetrated through the nonwoven fabric; and

a belt portion fixed to at least one of the nonwoven fabric and the back sheet, and extending to both sides in a direction that crosses a direction in which the nonwoven fabric extends, and moreover having a connection portion removably connectable to the nonwoven fabric, wherein

a portion, in which the nonwoven fabric and the back sheet are bonded together, has at least one part serving as an extension portion that does not overlap the absorbent and extends from an end portion of the absorbent on the abdomen side further toward the abdomen side,

in the direction in which the nonwoven fabric extends, a

length of the extension portion is greater than a length of the connection portion, and

the back sheet includes:

a first hook-or/and-loop fastener provided in the extension portion; and

a second hook-or/and-loop fastener to be connected to the first hook-or/and-loop fastener.

[Claim 4]

The diaper according to claim 3, wherein

the second hook-or/and-loop fastener is provided in the extension portion.

[Claim 5]

The diaper according to any one of claims 1 to 4, wherein the back sheet has a plurality of fold-line marks provided in the extension portion and at positions, each of which corresponds to a body weight of the baby.

[Claim 6]

The diaper according to any one of claims 1 to 4, wherein the nonwoven fabric has a plurality of hip marks provided on a top surface side of a middle portion of the absorbent and at positions, each of which corresponds to a body weight of the baby.
