of an applied region, and the shape-cut or shape-punched sheet is patched to the skin surface.

**[0004]** Moreover, still another type of cosmetic material sheet is proposed, which relaxes restraint against a behavior of a user during the patching of the cosmetic material sheet and facilitates treatment of the cosmetic material sheet, the structure being such that a sheet of the skin care ingredients is press-laminated on one-side surface of a base fabric composed of the water-repellent nonwoven or woven fabric having a shape and an area that enable an outer edge to be formed along the circumference of the sheet of the skin care ingredients (e.g., Patent document 3).

**Summary** ~~of Invention~~

[0005a] In one aspect of the present disclosure, there is provided a cosmetic tool comprising:

a retainer to include an annular frame and a handle for holding the frame; and

a cosmetic material to be produced by freeze-drying an aqueous solution of skin care ingredients and fixed in a way that covers an aperture of the frame.

[0005b] In another aspect of the present disclosure, there is provided a retainer of a cosmetic material, comprising:
an annular frame; and
a handle for holding the frame,
wherein the retainer retains a cosmetic material produced by freeze-drying an aqueous solution of skin care ingredients and fixed in a way that covers an aperture of the retainer.
[0005c] In a further aspect of the present disclosure, there is provided a method of manufacturing a cosmetic tool, comprising:
immersing, by impregnating an aqueous solution of skin care ingredients in an annular frame of a retainer including the annular frame and a handle for holding the frame, the frame in the aqueous solution; and
freeze-drying the aqueous solution in which the frame is immersed.

**Problems to be solved by the Invention**

[0006] In the cosmetic material sheet configured by impregnating the skin care ingredients into the base fabric composed of the non-woven or woven fabric, the skin care ingredients remain on the base fabric after being used, and hence it follows that the skin care ingredients are inevitably discarded. Further,
