SYSTEM AND METHOD FOR MANAGING RESOURCES

ABSTRACT

Embodiments of the present invention provide users with a system and method for managing resources. The method and system allow end users to participate in the trading of resources which enables lowering of costs for the end users. Furthermore, the method and system also enable utilisation of resources in a manner which can optimise a load (for example, electrical) for the resource supply. It should be appreciated that the resources can relate to, for example, water, fossil fuels, energy supplies and the like.
