Method for producing a binder

Description

The present invention relates to a binder, a method for producing a binder, and the use of a binder. Furthermore, the invention relates to a construction chemical product comprising such a binder.

Driven by government investments, the construction industry has seen a steady increase in incoming orders in recent years and accounts for a significant share of the manufacturing sector. In view of the recent focus on compliance with climate policy targets, the construction industry is therefore increasingly required to pursue environmentally friendly and sustainable concepts. For this reason, the concept of sustainable construction has been established for some time, which pursues various approaches to carrying out construction measures while preserving the ecosystem and the environment.
