(54) Title: LENS DEVICE AND AN OPTICAL PICKUP APPARATUS USING THE LENS DEVICE

(57) Abstract

A lens device which can be used as an objective lens in an optical pickup apparatus includes an objective lens (200) provided along a light path facing a disc (300a or 300b) and having a predetermined effective diameter, and light controlling means (100) provided along the light path for controlling the light in an intermediate region between near and far axes of an incident light beam (400), thus providing a simplified and inexpensive device for using discs of differing thickness in a single disc drive, by reducing the spherical aberration effect.
