

E-MAIL PROCESSING SYSTEM, PROCESSING METHOD AND PROCESSING DEVICE

ABSTRACT

An e-mail processing system includes a provider (4) connected to personal computers (1.2) and a portable telephone or a PHS (5) or a PDA (6) via Internet (3). In the provider (4), the content of a received e-mail is compressed by a keyword analysis to obtain a short text which is sent from the provider (4) to the receiver via the Internet (3). The receiver displays the short text to immediately understand the content. The whole short text can be displayed on a small screen of the PHS (5) or the PDA (6) without scrolling. The provider (4) can rearrange the received e-mail in order of receiver's priority and send the rearranged e-mail to the receiver via the Internet (3). The receiver can read in his optimum order with ease, and the e-mail requiring an urgent action can be preferentially displayed. The provider (4) can convert the e-mail text document into voiced e-mail sent via telephone network.
