Refrigerator

Abstract

It is aimed to provide a refrigerator, in which not only the fresh-food compartment but also the vegetable chamber is good in ease of use in respect of height position and volume capacity; the ice-maker chamber or the like having small capacity is positioned at adequate height to improve their ease of use; the freezer chamber having an improved volume capacity is able to be arranged; ratio of volume capacity to external volume is improved; and achieved are high strength of the refrigerator and its ornamental appearance that gives impression of neatness and large expanse. The refrigerator comprises: a fresh-food compartment (6) arranged on uppermost part of heat-insulator casing; a vegetable chamber (11) arranged within lower part of the fresh-food compartment (6); a chill storage chamber (19) and an ice-maker chamber (18) that are arranged side-by-side at beneath of a heat-insulating partitioner (5), which is on bottom of the fresh-food compartment (6), and are partitioned with each other by a vertical partitioner plate; and a freezer chamber (22) in a drawer construction, which is arranged at lowermost part in the casing, is adjacent to the chill storage and the ice-maker chambers (19 and 18) and has a right-left-wise dimension tantamount to that of the casing; so that inside of the casing is partitioned to four divisions that are the fresh-food compartment (6), the chill storage and ice-maker chambers (19 and 18) and the freezer chamber (7).
