CARD EDGE CONNECTOR

ABSTRACT OF THE DISCLOSURE

A card edge connector comprises an insulating body and a plurality of terminals. The insulating body comprises a base defining a forward mating slot and a plurality of passageways communicating with the mating slot, and two flexible arms respectively extending forward and upward from two ends of the base. Each flexible arm is provided with a locking member, a pressing member near the locking member, and a stopping member near the locking member and lower than the pressing member. The plurality of terminals are correspondingly fixed in the plurality of passageways. Each terminal includes a fixing portion positioned in the base, a soldering portion extending out from the base, and a contact portion extending into the mating slot.
