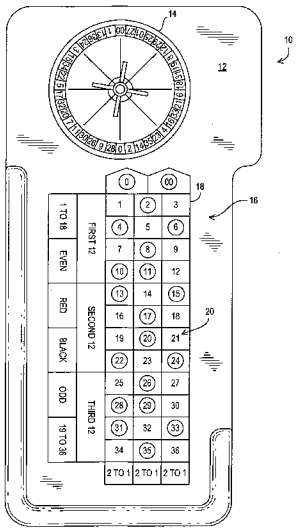
(54) Title: SELECTION OF MULTIPLE ROULETTE WHEELS



(57) Abstract: A roulette game allows players to place wagers across multiple roulette wheels. The player designates the amount of the wager, the particular outcomes on which the wager is contingent, and how many tables are covered by the wager. A control system automatically selects one or more tables across which the wager is based. The selection may be based on location of the player relative to the tables, impending outcomes from the tables, or other criteria as desired.
