ABSTRACT

SEAMLESS SELF ADHESIVE HAIR EXTENSION SYSTEM

The present invention consists of a seamless self adhesive hair extension and a method of attaching them to the head of a wearer. The seamless self adhesive hair extensions is comprised of a plurality of either natural or synthetic hair strands attached to a base support made of polyurethane which has a rectangular strip of double sided self adhesive tape with a removable backing as the fastener. The method of use consists of separating a users hair along a part line into an upper portion and a lower portion wherein the upper portion and lower portion are temporarily swept up and away from the part line. Another double sided rectangular strip of self adhesive tape is placed along the lower portion part line approximately a 6mm from the scalp onto the wearer's natural hair, then withdrawing alternating 6mm strands of the wearer's natural hair from the upper portion hair above the part line, the strands or rows will be laved upon the double sided self adhesive tape. The removable backing is removed from the tape that is attached to the hair extension or ventilated poly strip exposing the self adhesive tape; said self adhesive hair extension or ventilated poly strip is applied to the other double face tape on the wearer's head which contains said strands, or rows of the wearer's natural hair.
