(54) Title: GROUND ANCHORAGE

(57) Abstract

The present invention provides a single bore multiple anchorage in which a plurality of unit anchorages (2, 4) are contained in a single bore, the unit anchorages (2, 4) each comprising a tendon (12, 14) having a bond length bonded to the bore grout and a free length, wherein at least one of the tendons comprises a synthetic polymeric material. The ground anchorage means may be made by placing a plurality of unit anchorages in a bore, pouring grout into the bore and stressing each of the tends separately and locking the stressed tendons individually with respect to the anchor head.
