ABSTRACT OF THE INVENTION

A file folder is provided comprising: a cover consisting of a pair of front and rear cover portions, a spine portion provided between the front and rear cover portions, the width of the area of said spine portion that is exposed between said front and rear portions being variable; a plurality of binding prongs attached to the inner end of one of said front and rear cover portions or a folded portion formed at said inner end so as to project inside said cover; and a fastener provided at a folded portion formed at the inner end of the other of said pair of front and rear cover portions for bending said prongs in the direction away from the inner ends of said cover portions.
