(54) Title: RETAINING WALL SYSTEMS WITH SANDBAG ATTACHMENT MEMBERS

(57) Abstract: A sandbag retaining wall has interconnecting members for attaching sandbags in adjacent courses together. The sandbag interconnecting member has a generally planar body having at least three projections on its upper side and its lower side which can protrude into the sandbags. The sandbag interconnecting member is sized such that two sandbag interconnecting members can fit in spaced-apart positions on the upper or lower side of a sandbag. In another embodiment, the sandbag interconnecting member is a strip of material having an upper side and a lower side, both of which can form a detachable bond to a sandbag. The surfaces of the interconnecting member, and the sandbag wall, or a portion

thereof, comprise mating parts of a hook-and-loop fastener (velcro) or similar attachment means.
