【ABSTRACT】

~~The present invention relates to a pharmaceutical composition for hair loss reduction or treatment through the inflammation reduction of human dermal papilla cells and neighboring cells and the inhibition of 5α reductase expression, the pharmaceutical composition comprising genistein and kaempferol as active ingredients.~~

The present invention relates to a pharmaceutical composition for alleviating or treating hair loss through the inflammation amelioration of human dermal papilla cells and peripheral cells and the inhibition of 5α-reductase expression, the pharmaceutical composition comprising genistein and kaempferol as active ingredients.
